

ghgflux_survey_efoproject

EFO project: eddy covariance across field and management types

This script explores, visualizes, and analyzes hand-collected soil GHG flux data from the bases of three eddy covariance towers: one at a pasture, one at a conventional grain field, and one at an organic/regenerative grain field.

Packages, data upload

Upload data: summary flux data from Kyle's drive, HC server, year 2020

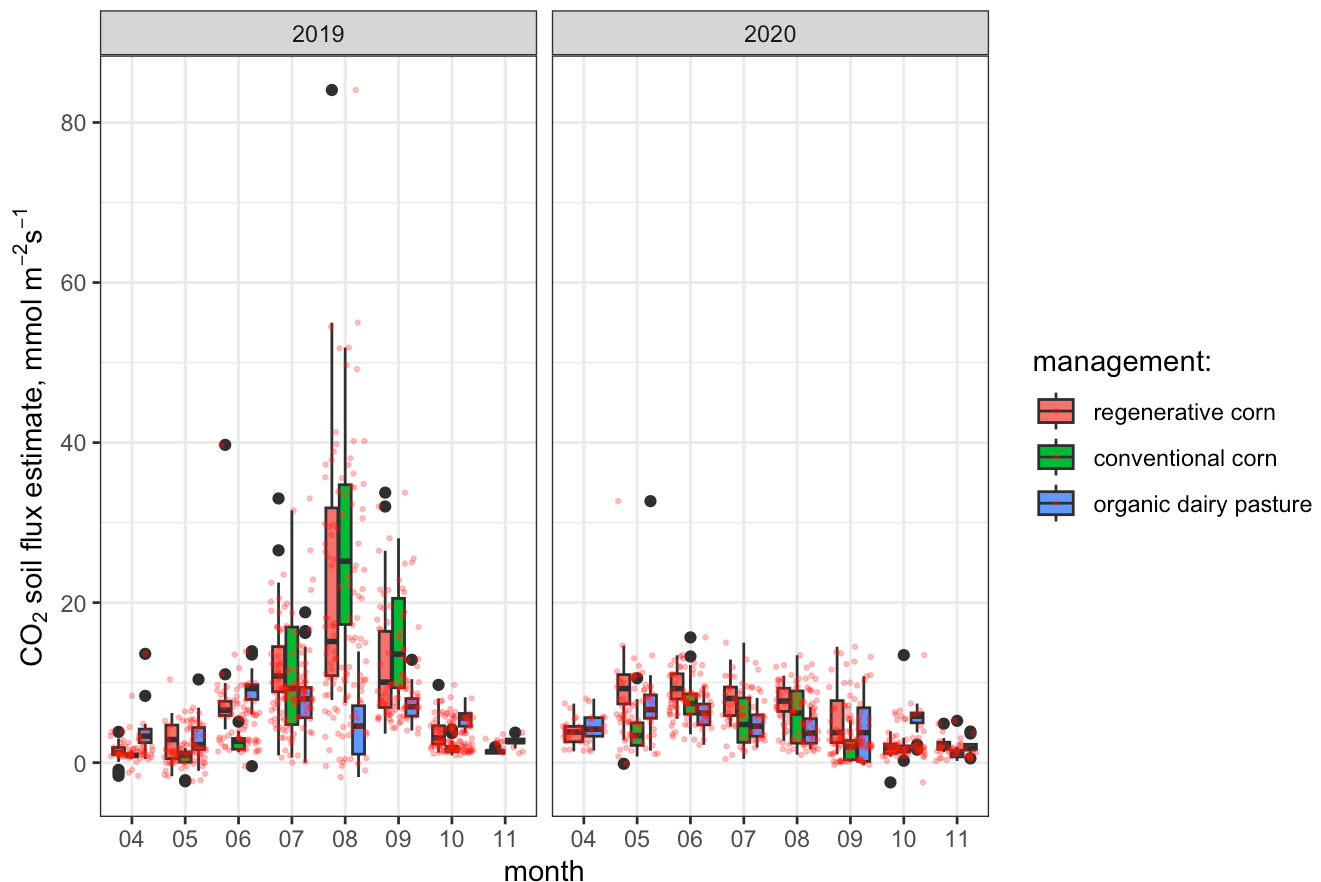

2019 data, found elsewhere on the server:

merge 2020, 2019 data:

Preliminary visual assessment: soil flux (Rs) data only

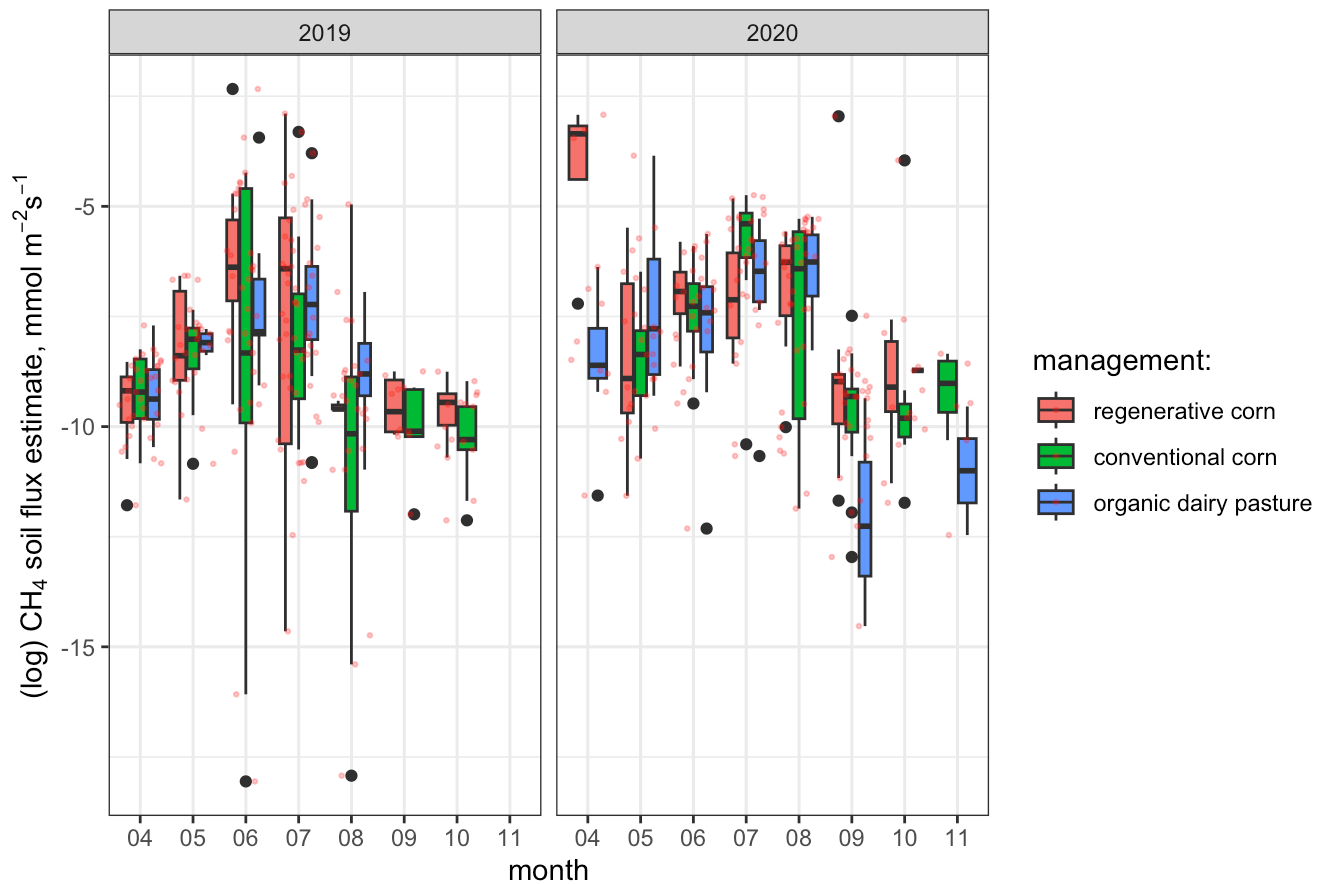

carbon dioxide:

CO₂ flux from soil: soil respiration

methane:

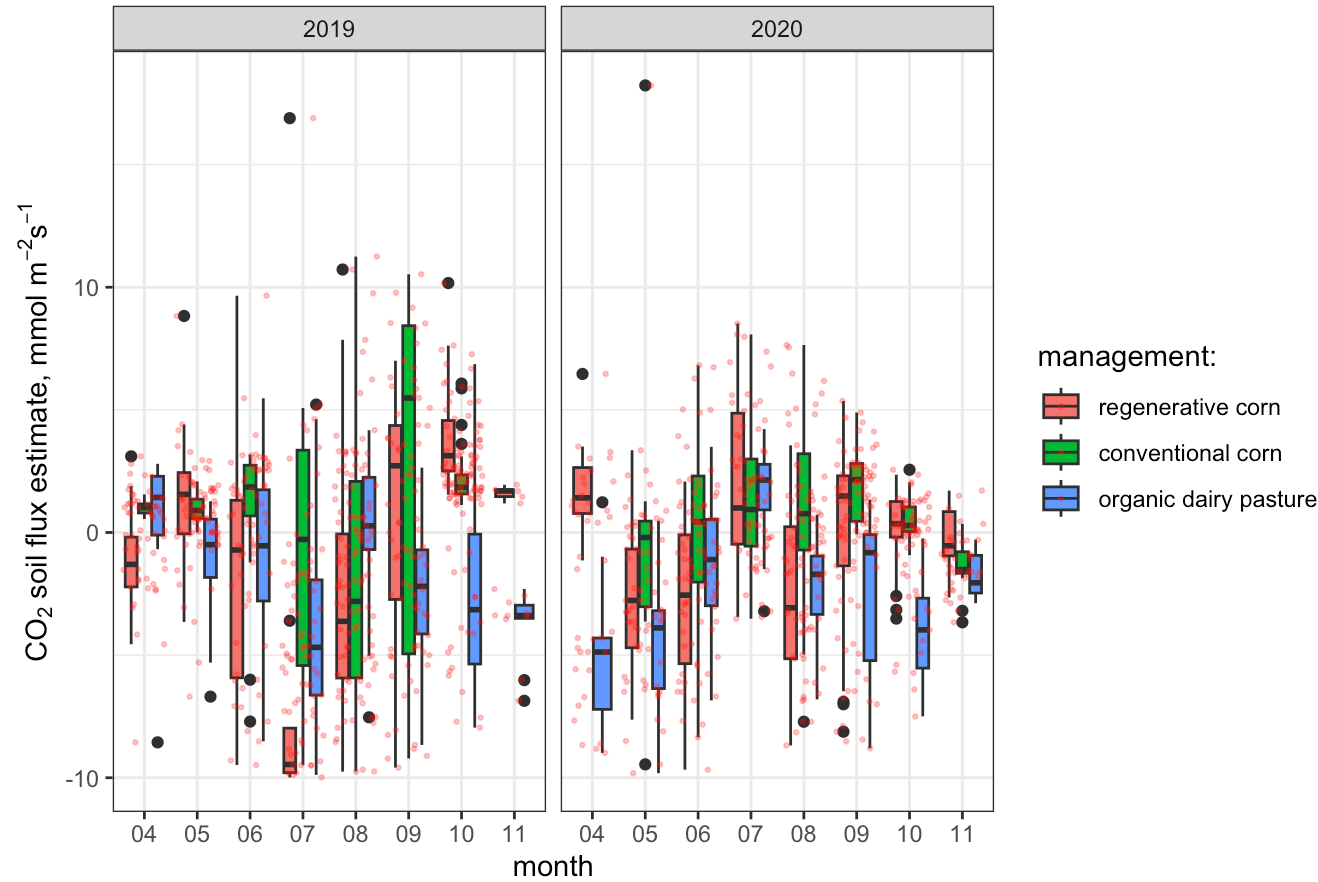

CH₄ flux from soil: soil respiration

Preliminary visual assessment: survey net exchange (NEE) data only

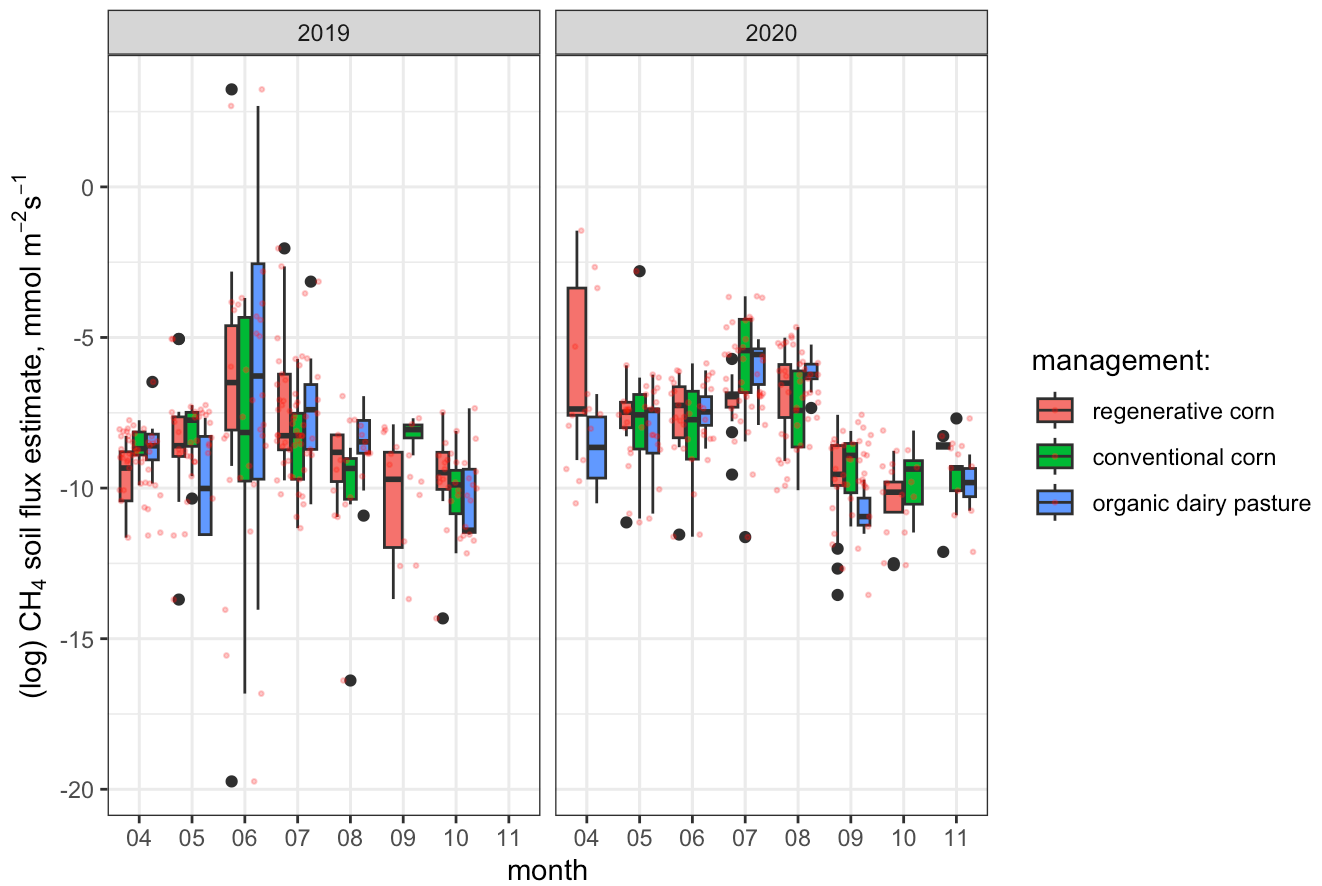

carbon dioxide:

CO₂ flux: net ecosystem exchange (clear chamber)

methane:

CH₄ flux: net ecosystem exchange (clear chamber)

Co-associated soil moisture, temperature, leaf greenness (SPAD), and NDVI.
